

Website Accessibility & Healthcare

Why accessibility matters in healthcare

It's the right thing to do.

It's the right thing to do.

Mission

To advance the health of the communities and region we serve, through collaboration, prevention, innovation, and exceptional care.

Our Mission

To enhance, every day, the health of our patients, our families and our communities.

We Care About

Our Patients and their Families

Delivering quality health care and outstanding service is fundamental to everything we do.

It's about real people who need
healthcare.

It's about real people who need healthcare.

20%

Of the population has a disability

328,318,861

It's the law.

It's the law.

- American's with Disabilities Act (ADA)
- Section 508
- Section 1557 of the Affordable Care Act

It's the law.

Over 2,250

Lawsuits were filed in the U.S. federal courts in 2018

Bureau of Internet Accessibility

It's the law.

Why should you invest in accessibility?

- It's the right thing to do.
- A significant portion of the population have a disability.
- People with disabilities often need additional healthcare.
- Creates a better user experience for everyone.
- Enhances search engine optimization efforts.
- It's the law.

Benefits of the Siteimprove tool

Creating more accessible, inclusive web content

What would you say you do here?

- Automated accessibility checks
- Guidance and recommendations on how to fix issues
- Task categorization – where to start
- Highlight issues on page
- Progress monitoring
- Manual-testing services – for those hard to reach places

Siteimprove by the numbers

7200+
customers

29
countries

40+
nationalities

550+
employees

94% customer
satisfaction

49.6M
checked pages

69K
active users

Did you know?

88% of visitors are less likely to return to a website after a poor experience

60% of clicks go to the top three websites in search engine results

75% of people base their perception of a brand on the company's digital presence

91% of website visitors do not trust a website that contains errors or mistakes

20% of the population has some form of disability

37% increase in digital accessibility lawsuits in the U.S. in 2016, affecting nearly every industry

The Siteimprove Intelligence Platform

We build our products on top of the Siteimprove Core Platform, a necessity for every digital marketer in today's smart web era.

Fully automated website checks, performance metrics, and industry benchmarks let you understand the state of your website at a glance.

- Customizable Dashboards
- Digital Certainty Index™
- Policy Management
- Response Monitoring
- Siteimprove Integrations
- Automated Reporting and Exports

Who uses Siteimprove?

What it means to be accessible

What it means to be accessible

Websites are inaccessible due to their owners being unaware and uneducated.

Let's change that.

Five myths about accessibility

1. Accessibility doesn't affect many people.
2. Only experts can implement fixes.
3. You don't have to worry about it until you get a request.
4. Accessible design interferes with general design and layout.
5. You are not required to fix because it's cost prohibitive.

What is Section 508?

Section 508 - an amendment to the United States Workforce Rehabilitation Act of 1973, is a federal law mandating that all electronic and information technology developed, procured, maintained, or used by the federal government be accessible to people with disabilities.

What is ADA?

ADA – Civil law making it illegal in this country for any government or business to provide goods and services to the public that are not also accessible to people who have disabilities.

What is WCAG?

Web Content Accessibility Guidelines (WCAG) - is developed through the W3C process in cooperation with individuals and organizations around the world, with a goal of providing a single shared standard for web content accessibility that meets the needs of individuals, organizations, and governments internationally.

WCAG guidelines

Level A & AA Compliance – “Compliant”

- Level A – Affects the most people.
 - Tab use when mouse access is unavailable
- Level AA – More situational, still affecting many
 - Color contrast

Level AAA Compliance – “Aspirational”

- Specific criteria – more situational
 - Media files with audio are required to have a sign language video

Getting started with web accessibility

Getting started with web accessibility

Accessibility is a process and not a project and it is relevant throughout the lifetime of a website.

Define your accessibility policy

- Identify the scope of the policy
- What to include
- What not to include

Accessibility

Date: July 17, 2019

What Is Website Accessibility

For the web, accessibility means that people with age-related impairments, can perceive, understand, and interact with websites and tools, and that they can contribute to the community.

Website Accessibility Statement

We are committed to improving the accessibility of our websites for the greatest number of people possible. We are committed to ensuring accessibility for people with disabilities and making our websites accessible to all. We ensure that all of our websites are accessible by using technologies such as automated tools, keyboard navigation, and screen readers.

Currently, we are in the process of updating our portions of the Section 508 Web Accessibility Standards, as well as the World Wide Web Content Accessibility Guidelines 2.0, as our web accessibility of our websites will be programmatic with assistive technology, including but not limited to screen readers.

Updated December 14, 2018

Website Accessibility Notice

At Essentia Health, we're committed to making our website content accessible for all our patients and users. We are always working to meet level AA standards of the [Web Content Accessibility Guidelines](#) (WCAG), including WCAG 2.0 and WCAG 2.1.

This website has been built using code compliant with W3C standards for HTML and CSS. This means current and future browser versions will display it correctly.

Areas We're Working On

We're working hard to achieve our goal of Level AA accessibility for WCAG 2.0 and WCAG 2.1. But, we realize some areas still need improvement:

- **1.2.5: Audio Description (Prerecorded)** - We're working toward adding audio descriptions for all website video content.
- **1.2.3: Audio Description or Media Alternative (Prerecorded)** - We're working toward adding video transcripts for all website video content.

Send Your Feedback

If you find an item that could use improvement for accessibility, let us know. [Fill out our online feedback form.](#)

accessible for all users.

built in compliance with [W3C standards](#) for a rich online experience and display correctly. We are actively working to increase both the accessibility of our site by doing a yearly accessibility audit.

and we invite you to help us make our site more accessible. If you experience difficulty accessing any of our services, please contact us during our office hours: 8am – 5pm (Monday – Friday).

ACCESSIBILITY

ing your Internet experience.

ase or decrease text size by holding down the shift key and pressing the plus or minus key:

Understand how to start an accessibility program

- Identify (realistic) goals
- Identify existing resources
- Identify legal/regulatory issues
- Identify current compliance/risk levels

Identify realistic goals

- Timelines (marathon not a sprint)
- Action plans
- Define milestones
- Budgetary considerations

Staff training

- Awareness
- Technical training
- Role-based training

Identify current compliance/risk levels

- Internal policies
- Federal or provincial/state regulations
- Current issues on existing properties
- Timelines for compliance

Buy-in from stakeholders

- Management
- Human resources
- Marketing
- IT Office
- Compliance/Legal
- Purchasing
- Other community stakeholders
- External agencies

Management

- Regulatory/Compliance
- Institutional policies needed
- Policy must have “teeth”
- Risk management

Management

- Cost effective
- Accessible technology improves productivity
- It's less expensive to build it right the first time
- Less support resources needed if individuals can access information themselves

Build the program with these components

- A shared commitment
- Concrete plan and policy
- Sufficient support
- Ongoing evaluation

A shared commitment

- Buy-in
- Awareness education
- Organizational policies
- Budgetary considerations

How to get started on your website

Assess

Assess where you are today

- Use crawler tool
- Manual testing
 - Test your top user paths
 - Test at different breakpoints
 - Use multiple screen readers

WCAG guideline 1.1 text alternatives

- Provide text alternatives for any non-text content so that it can be changed into other forms people need, such as large print, braille, speech, symbols or simpler language.

```

```

Should image be marked as decorative?

1.1.1 Non-text Content

This image has an empty alt text, which indicates that it only has a decorative function. If that is the case the page is in compliance with this criterion.

If the image is decorative you can use CSS to completely separate content from presentation.

If the image has a function the alt text must state this function.

Common issues

- Contrast ratios
- Missing alt text
- Empty links
- Missing labels
- Empty buttons
- Missing or inaccurate closed captioning, audio descriptions and transcripts on video/audio content

Hard decision:
fix or start fresh?

Prioritize

Prioritize what is important

- Rank items by severity

Prioritize

Severity One

The standards compliance defect is sufficient that someone with a disability will **be prevented** from accessing critical information or functionality.

Severity Two

The standards compliance defect is sufficient that someone with a disability will be prevented from accessing critical information or functionality but **there is a known work-around**.

Prioritize

Severity Three

The standards compliance defect does not impact access to critical functionality or information but **may prevent access to non-critical** information or functionality.

Severity Four

The standards compliance defect **only impacts the ease of use** of the product but not access to any information or functionality.

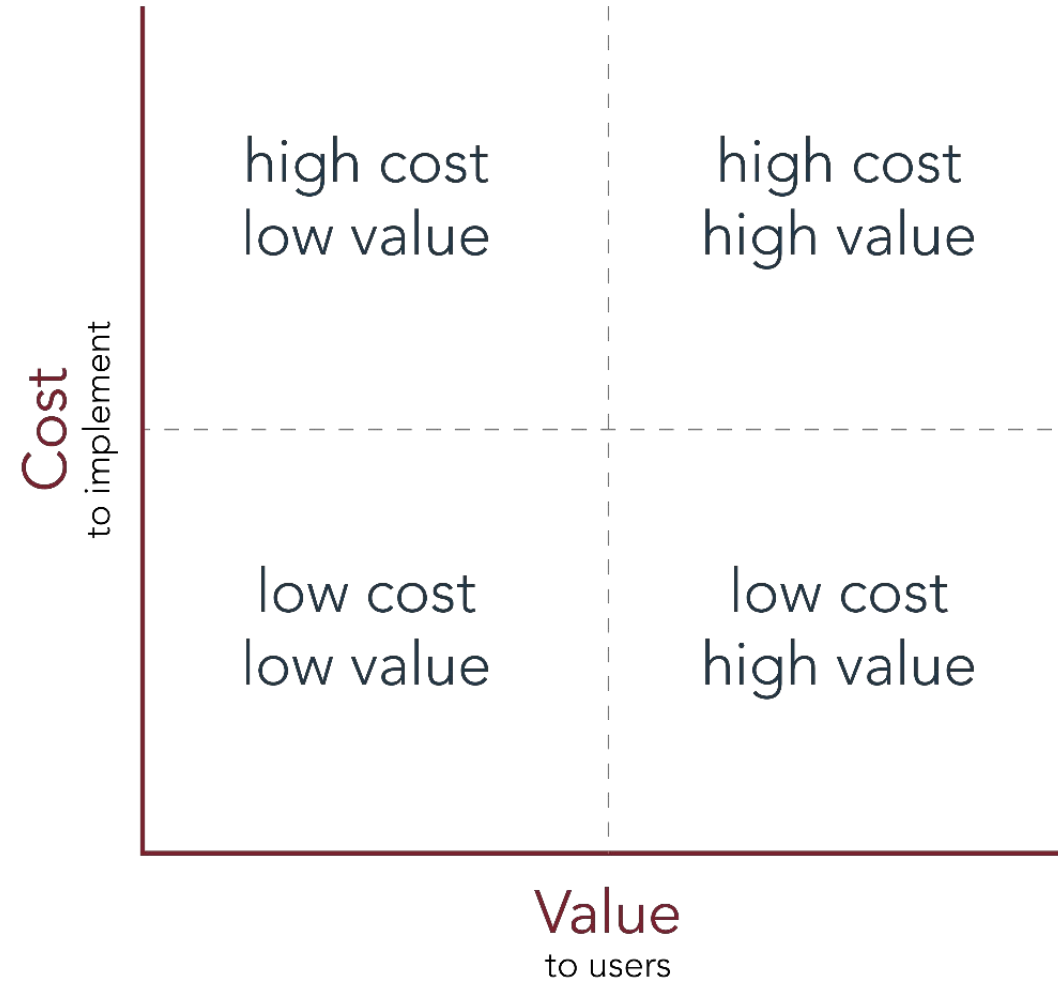

Prioritize

Prioritize what is important

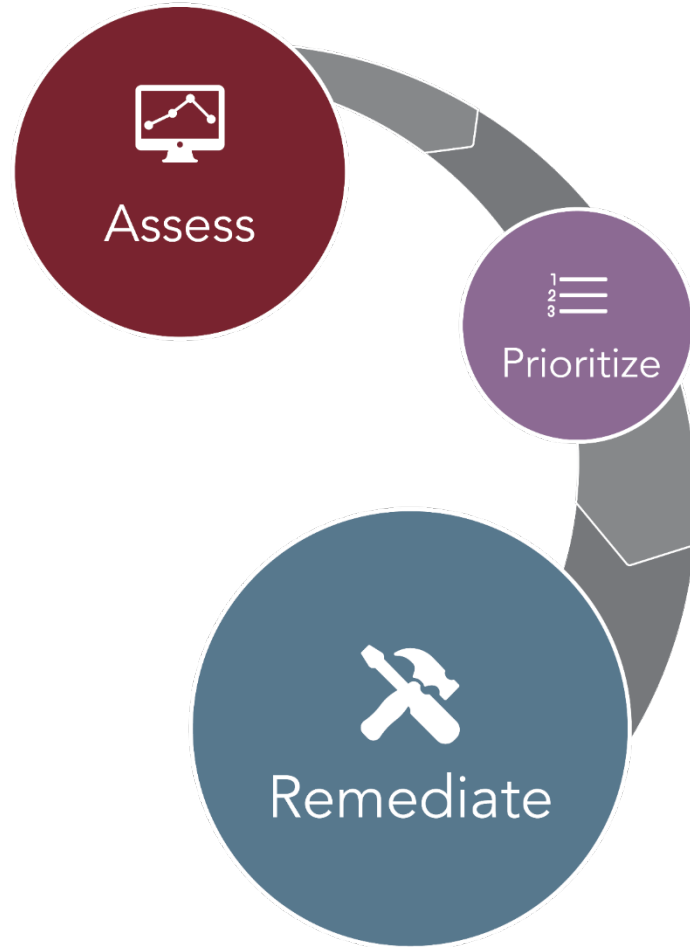

- Rank items by severity
- Rank items by cost vs. user impact

Prioritize

Remediate

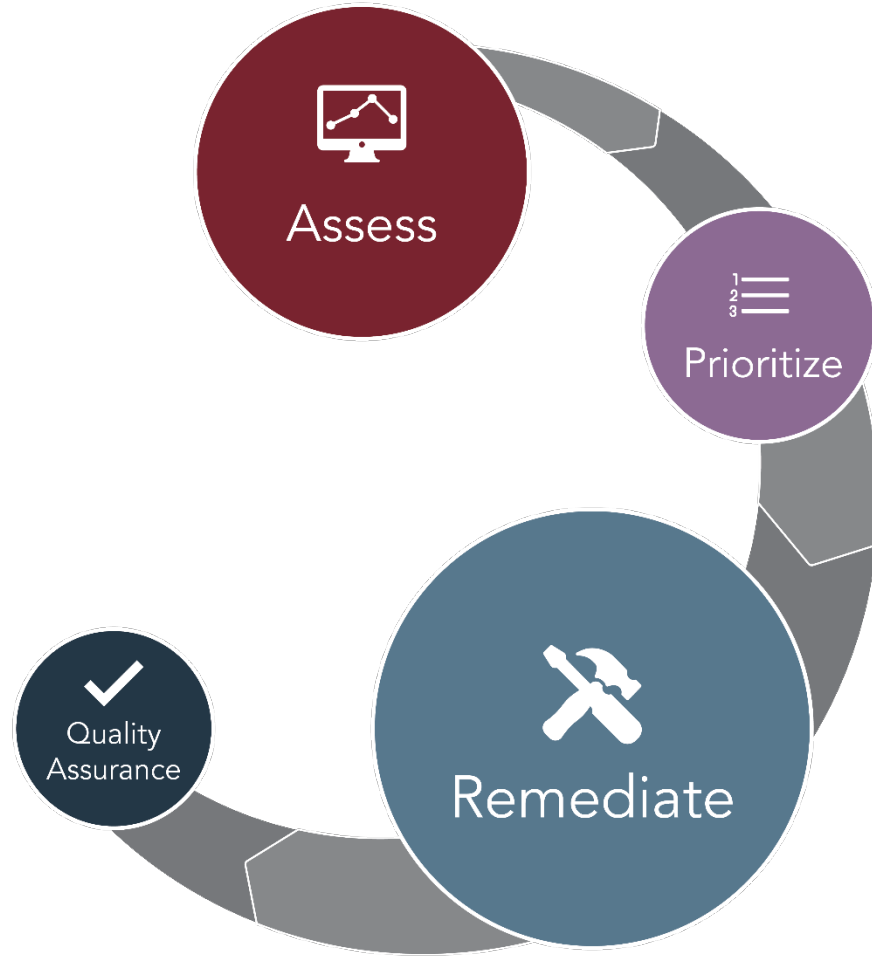

Remediate

- Fixing the issues
 - Closed captioning
 - Audio descriptions
 - Transcripts
 - Alt text
 - Keyboard operable
 - Etc.

Quality assurance

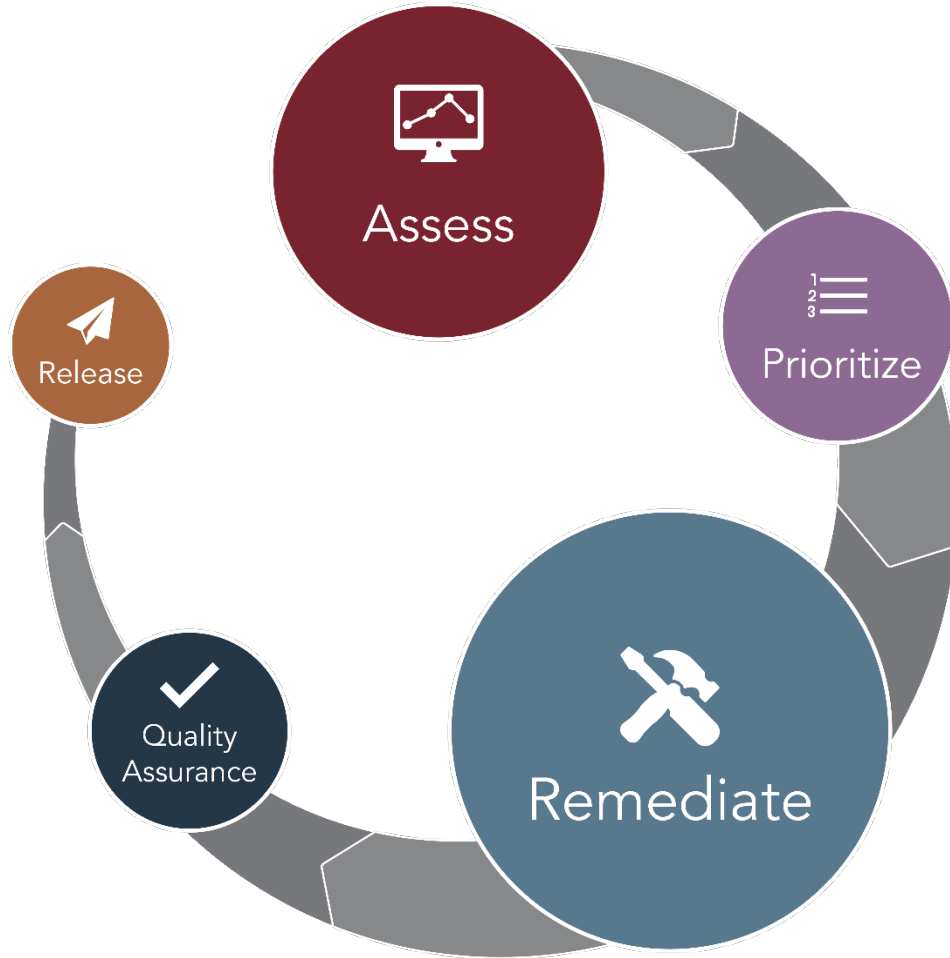

Quality Assurance

- Proof changes
- Test, test, and re-test

Release

Release

- Publish your changes/fixes
